

CRITICAL CONDITIONS monitoring

Generator Monitoring

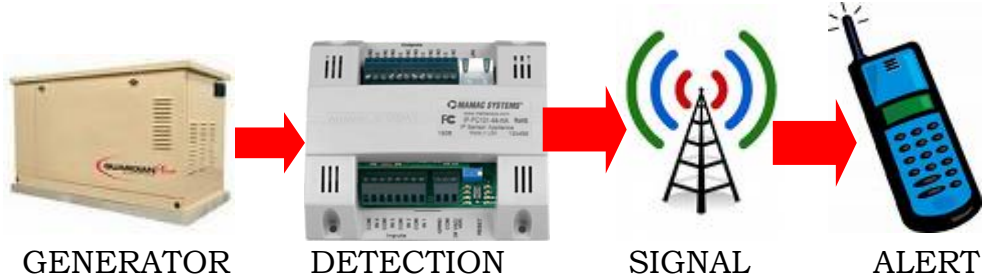

“...time is of the essence...”

Statewide Insurance Trust Headquarters

Moving into their new facility this customer requested emergency generator status monitoring at their State headquarters facility in Tallahassee, FL. The Maverick fit the bill perfectly as the most reliable and cost effective appliance for monitoring conditions at the facility.

The facility manager sought reliable monitoring technology in support of the IT department. The server room required 24 hour monitoring of utility power delivered to the facility. In the event of a power loss, to prevent the loss of critical data - management personnel needed to know that the back-up generator was in service and operational. Time was of the essence; orderly shut-down of equipment would be required in the event of a system failure. The UPS back-up would last only 20-30 minutes.

The Maverick provided SUCCESSFUL, field-customized generator monitoring at the facility. Weekly ‘exercise’ of the generator brings an email reminder that the Maverick IP Appliance is on duty!
